

GOTIC-002

**Metronomic Chemotherapy after
Chemoradiation Therapy for
Locally Advanced Cervix Cancer**

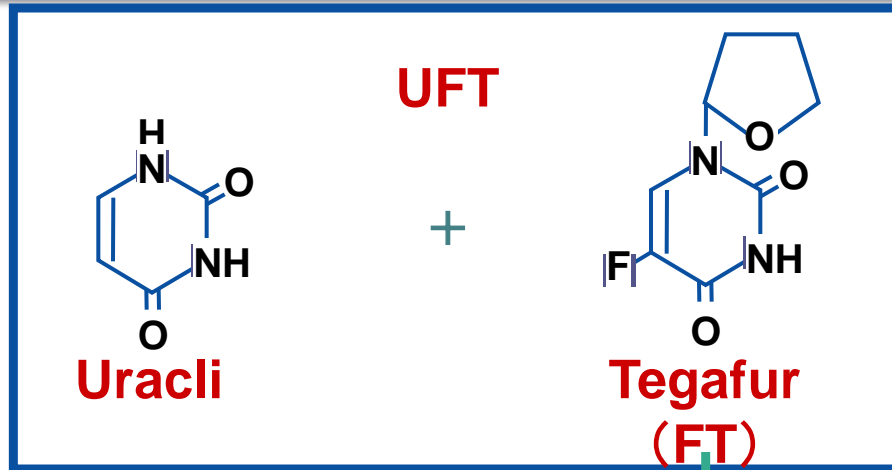

**Long UFT Administration Trial
(LUFT Trial)**

Metronomic Chemotherapy

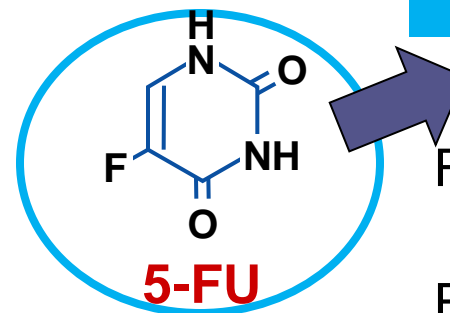

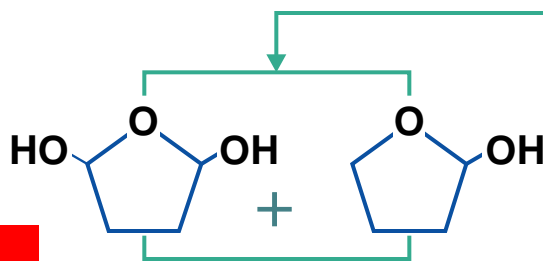

- ▶ **Continuous administration (without interval) of low dose of cytotoxic drug will provide anti-angiogenetic effect, and tumor dormancy can be obtained.**

Proposed by Kerbel and Folkman

UFT: Mechanism of Action

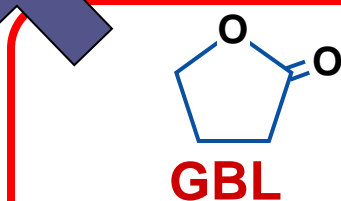

Cytotoxic Effect

FdUMP → TS inhibition
FUTP → F-RNA

Anti-angiogenetic effect

GHB
(γ -hydroxybutyric acid)

GOTIC-002

**Randomized Phase III Trial of Long UFT
administration following curative radiation
therapy for locally advanced cervical cancer**

LUFT Trial

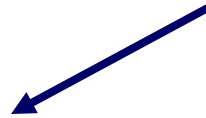

試験の概要

Target Accrual
530

Cervical Cancer
FIGO Ib2-IVa期
After Chemoradiation

Registration
Randomization
Stratification: Stage (Ib2, II vs III, IV)、Institution

Observation

UFT

300mg or 400mg / day
bid 24 months

Endpoints

Primary Endpoint:

PFS

Secondary Endpoints:

OS

Toxicity

Quality of Life (QOL)

Cost Effectiveness
