

TOTEM Study: Multicentric randomized controlled clinical trial between two follow up regimens with different tests intensity in endometrial cancer treated patients / NCT 00916708

Trial setting: patients surgically treated for endometrial cancer, if in complete clinical remission confirmed by imaging, FIGO stage I-IV

Study Design: multicentric RCT between minimalist and intensive follow up (after first stratification of patients between low risk [IA G1-2] and high risk [\geq IA G3] of recurrence)
Primary objective: compare the effect of the two follow-up regimens on 5-years overall survival.

Sponsor(s): Azienda Ospedaliera San Giovanni Battista (now: Azienda Ospedaliero-Universitaria Città della Salute e della Scienza di Torino)

TOTEM Study: Multicentric randomized controlled clinical trial between two follow up regimens with different tests intensity in endometrial cancer treated patients / NCT 00916708

Planned No. of patients: 2300

Current accrual: 1651 patients enrolled on 10th May 2017

Other important information:

- ✓ 2 French Institutions shared the trial (total number of units sharing the trial: 41)
- ✓ the interim analysis is ongoing: are we able to close the trial?
