

Translational Research Committee Meeting

October 18, 2018

Summary Report for General Assembly

The main directional/managerial issue that was discussed was the engagement of young investigators. We would like to open the meeting up to young investigators without restriction of numbers. We would like if possible to reserve a slot for competitive access to present at the translational meeting based on the best abstract or abstracts.

It was also suggested that when new trials are discussed with industry, the inclusion of young investigators in the group that performs the translational design, is negotiated.
