## **Endometrial Cancer Conservative treatment**

**A multicentre archive**

### **PROJECT TYPE / DESIGN & TIME PERSPECTIVE**

Observational / Patient archive, Prospective (a first phase of three years is planned, eventually followed by further three years)

### **INCLUSION CRITERIA**

- Conservatively treated endometrial cancer
- Informed consent to personal data processing
- Existence of an IRB-approved local protocol that allows conservative treatment to be performed (or statement that such treatment is considered as a standard)

### **INTERVENTIONS & OUTCOME MEASURES**

Data collection - PRIMARY OUTCOME MEASURES: proportion of complete regression, duration of response, frequency and pattern of relapse, frequency of metachronous ovarian cancer, tumor-related deaths; SECONDARY OUTCOME MEASURES: treatment related morbidity, frequency of spontaneous pregnancies, frequency of pregnancies after ART, pattern of residual disease on definitive surgical specimens

### **TREATMENT**

SINCE THIS IS A ARCHIVE, TREATMENT IS NOT DICTATED BY A PROTOCOL, HOWEVER, TREATMENT HAS TO BE ADMINISTERED ACCORDING TO A IRB-APPROVED LOCAL PROTOCOL (except for the countries where conservative treatment can be given outside a IRB-approved study because considered as a standard procedure)

# Endometrial Cancer Conservative treatment A multicentre archive

**A new CRF has been added**

## **Mutational Status**

Germline BRCA mutation
BRCA1
BRCA2
Somatic BRCA mutation
BRCA1 mutation
BRCA2 mutation
Lynch syndrome (LS)
Germline LS genetic testing
LS tumor testing (MSI)
Microsatellite instability (MSI)
LS tumor testing (IHC)
MLH1
MSH2
MSH6
PMS2
ProMisE Molecular Classifier
Mismatch repair (MMR) deficiency
POLE (EDM) ultramutated
p53
