

PROJECT TYPE / DESIGN & TIME PERSPECTIVE

Observational / Patient archive, Prospective (a first phase of three years is planned, eventually followed by further three years)

INCLUSION CRITERIA

- Conservatively treated endometrial cancer
- Informed consent to personal data processing
- Existence of an IRB-approved local protocol that allows conservative treatment to be performed (or statement that such treatment is considered as a standard)

INTERVENTIONS & OUTCOME MEASURES

Data collection - **PRIMARY OUTCOME MEASURES**: proportion of complete regression, duration of response, frequency and pattern of relapse, frequency of metachronous ovarian cancer, tumor-related deaths;

Data collection - **SECONDARY OUTCOME MEASURES**: treatment related morbidity, frequency of spontaneous pregnancies, frequency of pregnancies after ART, pattern of residual disease on definitive surgical specimens

TREATMENT

SINCE THIS IS A ARCHIVE, TREATMENT IS NOT DICTATED BY A PROTOCOL, HOWEVER, TREATMENT HAS TO BE ADMINISTERED ACCORDING TO A IRB-APPROVED LOCAL PROTOCOL (except for the countries where conservative treatment can be given outside a IRB-approved study because considered as a standard procedure)

E.C.Co.
Endometrial Cancer Conservative treatment
A multicentre archive
